

Barents Super-Tie 2014 extension

— Available data — 2014 extension — Reprocessed Russian data

The 2014 extension of the Barents Super-Tie is 3 500 km and will go through the important structural features of the Norwegian Barents Sea South-East: Finnmark Platform, Tiddlybank Basin, Fedynsky High, Nordkapp Basin and Bjarmeland Platform.

The extension of the Barents Super-Tie will also tie on to 3 500 km reprocessed data in the Russian Barents Sea tying known discoveries and structures.
